

### **Assignment-3: Model Inference Application**

The process is almost complete and now the model is ready to serve predictions online.

Your final task is to deploy the model inference application which is running on Flask to **GCP Cloud-Run**

Below is the breakdown of your tasks:

1. Go through the model inference application and execute it from your local system
2. Deploy the flask application to cloud run
3. Run curl commands to ensure the endpoint is working as expected
